

## Global Warming?

Many very sincere people have become convinced in recent years that human emissions of CO<sub>2</sub> are causing serious global warming. Unless we develop alternative sources of energy like wind turbines, prophets of doom are forecasting **dire and catastrophic consequences**. Well-intentioned local wind power supporters have been led to believe that sacrifices are necessary to “**save the planet**” from cooking in its own gases. **But wait! What about this graph**, provided by US Senator James Inhofe, Chairman of the Committee on Environment and Public Works?

IPCC Greenland Temperatures

Is the planet getting warmer? Yes, but not nearly as warm as it got in the 1930s. It's almost back to where it was in the 1970s before the planet cooled for a decade, prompting alarmist cries of an impending Ice Age. **Would you like to read more about this?** Stop by and check us out online at [www.cohoctonfree.com](http://www.cohoctonfree.com). While you're there, be sure to visit our “**Updates**” section and read Senator Inhofe's full reports.
